MicroPlanet Gravity is a easy to use Usenet client application for Windows™ 95/98. It is fast and easy to set up and use. The article above is a review and not an official text from the author or the publisher. I have enjoyed the comments from some of you on my review of several Usenet newsreader clients. After the number of comments I am now going to do something I seldom do — I'll post my recommendation of a usenet client that fits my requirements: 1) read binaries. 2) has great UnNews features 3) integrates with email/NT/MS Outlook 4) I like the look of the GUI, using Vista may or may not be an issue. 5) The best of all, it is free, so I don't have to use a $45 upgrade just to get an equal UI. This is a review and not an official text from the author or the publisher. The client I recommend to everyone is MicroPlanet Gravity. I've used three Usenet clients in the past, and I was expecting at least one of them to be overkill. However, Gravity has a well developed feature set and does everything I want, plus it is free. I've had everything I want in Usenet client applications down the years, but I believe Gravity has been overlooked by most of the clients. It used to be the primary client of the planet.nu group, but I have never considered the group important for news, so I haven't kept track of it. I use Gravity as the primary Usenet client. It is great for reading binaries, and even produces them in a format that is recognized by most unices. I'm not the only one who has discovered this. Gravity is fast, although not as quick as some of the other clients, and I'm not seeing any significant drop in speed as I add more features. It is a pleasure to use, and I think everyone should try it. I get more features than I ask for. Gravity is my favorite client. I hope it's not too late for new newsreaders: If you are planning on it, yes there is the 1st beta for NetNews if you wish to give it a
