Adobe Font Development Kit For OpenType For Windows

The Adobe Font Development Kit for OpenType (FDK) is a set of open-source command-line programs designed to support the development of new or modified fonts. The FDK includes a highly customized version of Adobe Type Manager (ATM), the Font Manager that comes with Adobe Photoshop and Illustrator, as well as the AFDKO, a set of command-line programs designed to allow you to construct and format fonts. The FDK uses a detailed directory tree structure (in Adobe's XML format), which contains information about fonts and their component parts. The structure includes the entire font file itself, including the font outline, the TrueType, CID, and OpenType versions of the font, metrics, and table files, and resources and other supplementary information. The structure of the FDK is highly flexible, allowing it to be modified to meet the needs of various types of font creation tasks. The AFDKO provides many of the tools you need to create and test fonts, including the ability to write font outlines and metrics in a format that can be read by Adobe Type Manager and Adobe Font Manager. This version includes tools for creating and editing a font's tables, allowing you to build a wide range of OpenType fonts from any type of TrueType, CID, and OpenType font file. Note! Although the FDK directory tree contains a number of Python scripts, none of them can be used by double-clicking on them; they can only be successfully called from the command-line. Most of the scripts now have an OpenSource license, so that you alter them as you like. Get AFDKO and start creating your own fonts! This new release of the Adobe Font Development Kit for OpenType (AFDKO) contains the set of tools used by the Adobe Type Department to make OpenType fonts. These command-line programs that will allow you to build an OpenType font from an existing font, verify the contents of the font, and proof the font on screen or on paper. The AFDKO also contains useful technical documentation and some of the source material required to produce OpenType fonts, as well as instructions on how to create and structure this source material for your own font production work. – The AFDKO provides three sets of tools for building OpenType fonts from existing fonts. + – * ""The script-based tools"" are for people who want to make font editing programs, or for those who want to make a font editor that is specific to OpenType. + – * ""The command-line tools"" are for people who want to make an OpenType font from scratch. + – * ""The file creation and editing tools"" are for people who want to create font files, or who want to add OpenType features to an existing font. + – + – We've also done some work to make sure that the AFDKO, and the AFDKO's documentation, are more intuitive. For example, we've included new technical documentation that explains how the AFDKO works. We've included large sections of the AFDKO's output files as HTML Web pages so that you can read them more easily. We've updated the Web site with an easy-to-use graphical interface to access the AFDKO's documentation. + – + – A new reference material for creating OpenType fonts has been added to the AFDKO. It contains technical and programming information on creating OpenType fonts. + – + – ==The script-based tools== + – + – These script-based tools are made available for use in the AFDKO. They allow you to create a complete font editor, or create parts of one, that is specific to OpenType. + – + – + – + – We've created a few font editors that are specific to OpenType. + – + – + – + – We've been working on a font editor called ""Traget"" for making OpenType fonts. It is meant to be an ""interactive"" editor, not a ""convenient"
